

SINGLE STOCK FUND Integrated Requirements Determination MS1 Business Rules

18 May 99

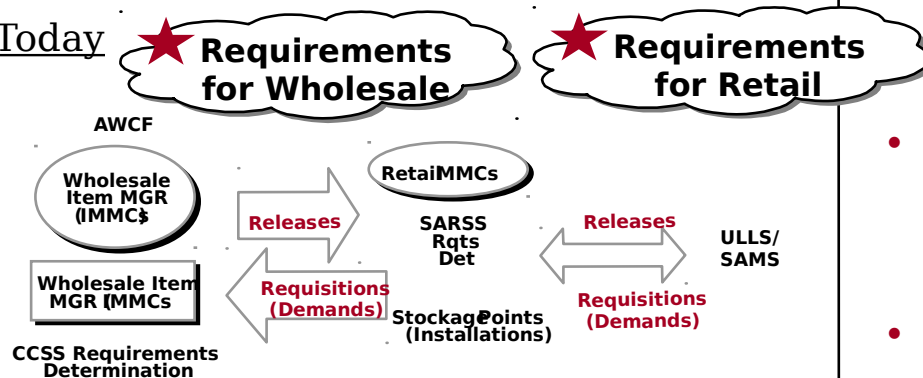

- Requirements Determination -

Definition:

Occurs when *National Manager routinely includes all AWCF-SMA stocks in national determination process.*

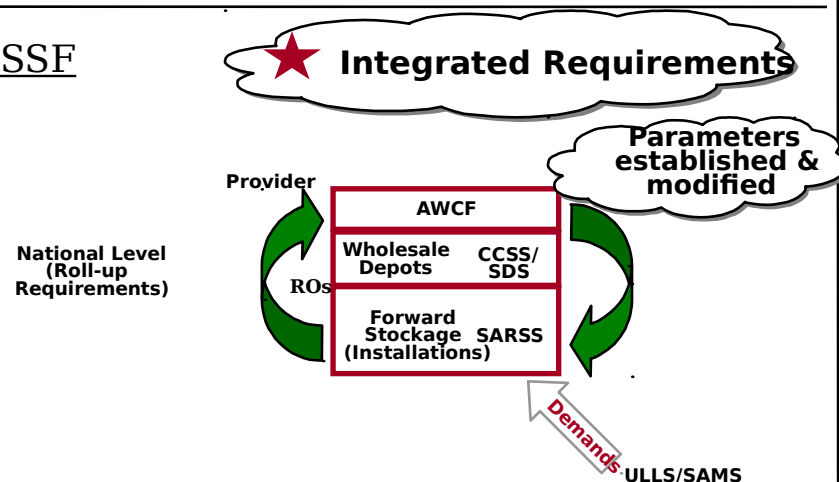

Today

- Key MS 1 Characteristics

- SARSS 1 requirements determination process feeds requirements objectives (CCSS; AMC/National Business Manager sets SARSS parameters)
- Installation stocks will be part of National Level Inventory
- ROs will be set in consonance with DA policy. Commanders influence stockage decisions through joint review process
- One view of total Army RO per National Stock Number

SSF

- *Integrated Requirements Determination* -

- All AWCF-SMA SARSS-1 sites will be a part of the business. SARSS will continue to manage the stock and release assets to customers on the same Installation and will use lateral redistribution. AMC will retain the complete management of Army-managed items in the AWCF-SMA. Non-Army managed items within the SSF will only be redistributed by exception. This will ensure the AWCF-SMA does not incur non-reimbursable costs associated with moving non-Army managed items between locations.
- SARSS will continue to calculate the requisitioning objectives and retention levels for AWCF-SMA SARSS-1 sites and pass the information to CCSS. Replenishments will occur based upon a 'Pull system' from SARSS. This means that AWCF-SMA accounts in SARSS will be replenished only when the reorder point is reached. The AWCF-SMA SARSS-1 account will generate a replenishment requisition with a non-reimbursable fund code. Visibility of SARSS activity will be provided to the national level via post post transactions to CCSS.

Requirements Determination -

BR	Revised MS 1 Business Rules	DEMO	MS 1
RBR 1	Current Functional processes for historical data, reconciliation and RO calculations will be performed by both the AMC installation manager and the AMC CTASC manager.	X	X
RBR 2	Substitutes will be IAW existing interchangeable and substitutable (I&S) relationships.	X	X
RBR 3	The National Stock Record will record ROs for installation AWCF-SMA sites.	X	X
RBR 5	Army National Guard will not be affected by the RDES process at MS1.	X	X
RBR 6	AMI retention decisions will be made during the requirements determination computations in CCSS process, including ABF considered assets.	X	X
RBR 7	Catalog updates will occur for credit the same way they do for prices today, in the same manner and at the same time.		X
RBR 8	NAMI retention decisions will be made in SARSS.	X	X
RBR-9	The Integrated RDES process will include computations from SARSS-1 AWCF-SMA storage sites, in the form of safety level, ROP, and RO. For MS1 the national RO will not be a summary of installation ROs and wholesale RO. A process will used which will be developed jointly by SARSS and CCSS. Initially, SARSS computed requirements will be used. Over time, more weight will be given to the CCSS computed requirement, after validation.		X
RBR 10	DOD/DA Policy will be implemented in a SSF unless waivers or exemptions are obtained.	X	X

- **Validated Exit Criteria: Determination** -

- **1st Criterion:** All AWCF-SMA ROs will be received and reflected in the CCSS NSNMDR Requirements Sector for consolidation into national ROs.
 - ***Approved Measurement:*** Review the SIMS-X Sector of the NSNMDR to ensure that all document history transactions generated from AWCF-SMA SARSS1 sites are received and recorded. Ensure SSF SARSS1 ROs are recorded in national level files for further processing.
- **2nd Criterion:** All AWCF-SMA assets must be reflected and considered in national level asset summarization process.
 - ***Approved Measurement:*** Review the On-hand Sector of the CCSS NSNMDR to ensure that all assets reflected on AWCF-SMA SARSS-1 records are captured to be used in the comparison of assets to consolidated Reorder Points and ROs.
